warm with envy.**

RadiantPanel Baseboard™

Hydronic Alternatives flagship product, the Radiant Panel Baseboard! It looks just like traditional mopboard but is actually a low temperature radiant heating system! The RadiantPanel system is an excellent alternative to conventional radiators and baseboard units. It provides a comfortable, yet invisible heating solution for just about any room. You can finally have what everyone else wants – radiant heat that's hidden in the baseboard, not the floor. It's just one of the many creative heating solutions we offer that are as eye-pleasing as they are functional. **To learn more, call us at 413-543-8733 or visit hydronicalternatives.com.**

RadiantPanel comes complete with 3/8" I.D. compression fittings suitable for PE-RT, reflecting foil, and mounting brackets. Trim and installation accessories are also available.
